Author Index to Volume 47

(L) indicates Letters to the Editor and (E) indicates Errata. It will be noted that there are no references to "see someone else" in the Author Index. Although it has meant a little duplication, there has been included under each author all articles in which he was author or co-author. All articles in which the author has participated are arranged in the chronological order of publication. A bibliography with author names arranged as in the original article is obtained by insertion of the author's name in the indicated (——) space under each indexed name. Although not strictly an authored article, we have included Book Reviews both under the book author as well as the reviewer.

The abstracts of papers presented at meetings are keyed by the same notation that identified them by day and session of presentation. If the paper covered by the abstract has been submitted and published in the same year as the abstract, this has been indicated by a solidus (/) between the abstract notation and the Journal page of the full article, i.e. 264(FA*12*)/622 indicates that the paper described in abstract No. FA*12* on page 264 has been published in full on page 622.

Abbitt, William H. Device for the safe interchange of the lens and prism mounts of a Bausch & Lomb Littrow spectrograph—862(L)

Abelès, F. Optical properties of thin absorbing films—473

Abetti, Giorgio. *The Sun* (Book). Reviewed by A. B. Meinel—1137

Subject Index to Volume 47

Key to Index use.

1. Subjects, not titles have been indexed.

2. Contents of papers (and abstracts of papers presented at meetings) have been indexed rather than a word breakdown of the title.

3. Principal subjects are given in boldface type. Cross-referenced subjects which should be consulted for a more thorough coverage are given in italics after the principal subject.

4. (L), (B), (E), (N) indicate: (L) Letters to the Editor; (B) Book Reviews; (E) Errata; and (N) Notes including Technical Notes, Personalia, and Necrology. The abstracts of papers presented at meetings are keyed by the same notation that identified them by day and session of presentation. If the paper covered by the abstract has been submitted and published in the same year as the abstract, this has been indicated by a solidus (/) between the abstract notation and the Journal page of the full article, i.e, 264(FA*12*)/622 indicates that the paper described in abstract No. FA*12* on page 264 has been published in full on page 622.

5. Subjects have been indexed in subdivisions according to key words with prepositions such as "on," "in," "of," "with," included where essential for euphonious interpretation but not affecting the alphabetical arrangement of the principal subject. In many cases, where obvious, these prepositions have been omitted.

Aberration
  eye
    axial chromatic aberration of human, 564(L)
  images of partially coherent objects affected by small —, 405
  lens
    thin, 257(B)
      secondary chromatic, 1135(L)
  residual — automatically corrected, 1104
  spherical
    third- and fifth-order — and transfer function, 1053 (FB*43*)
  third-order
    theory for varifocal systems, 579
Absorption (see *Spectra*)
Alkali Halides
  pellets in color center experiments, 327(L)
Aluminum
  optical constants of — in vacuum ultraviolet, 120(SA*17*)
American Institute of Physics
  development fund, 193(N), 572(N)
  handbook, January, 1957, 330(N)
  The Physics of Fluids, new journal published by, 978(N)
American Society for Testing Materials
  fifth mass spectrometry symposium, New York, May, 1957, 329(N)
  punched card indexes to absorption spectral data prepared by, 672(N)
The Annals of the International Geophysical Year
  new journal published by Pergamon Press, Ltd., 978(N)
Annals of Physics
  new monthly journal of physics, published by Academic Press, Inc., 258(N)
Apparatus
  Brewster angle — for thin film index measurements, 62
Astrophysics
  aerial objects
    contrast of, 1047(TC*63*)
    photographic detection and recognition of, 1047(TC*62*)
      liminal image size for conventional film readers, 1048 (TC*64*)
  earth satellite
    detection of
      angular motion effect on threshold for, 1047(TC*61*)
    tracking of IGY, 1047(T*52*)
  solar absorptivity
    infrared reflectometer for measurement of, 1048(TC*66*)
  spectrograph
    Auroral Patrol — for IGY, 1048(TC*65*)
  stars
    book on, 1137(B)
  stellar shadow patterns, 1047(T*51*)
Atmospheric Optics
  air
    light transmission
      stereoshadowgram experiments in lower atmosphere, 346(SB*34*)
    standard
      refractive index for — and Rayleigh scattering coefficients for 0.2–20.0μ, 176
  boil
    method for measuring, 1056(SA*17*)
  daylight
    luminous efficiency of, 113(TC*65*)
    natural illumination of — measured, 113(TC*65*)
  fog
    transmission by — in 0.35 to 10μ region, 491
  haze
    horizon
      striae in, 346(SB*33*)
    transmission by — in 0.35 to 10μ region, 491
  illumination of vertical surfaces at high altitudes, 111 (TA*12*)
  night airglow emission lines
    narrow-bandpass photometer for measuring λ 5577(OI), 111(TA*11*)
  radiation
    earth-reflected solar visible — as function of altitude and terrain, 112(TA*14*)
    scattering coefficient for infrared — in natural haze, 345 (SB*31*)
      wavelength dependence, 345(SB*31*)
  range simulator
    variable, 1056(SA*18*)
  refraction
    over water, 113(TC*61*)
    index of
      atmospheric spherical particles ($1.33 \leq n \leq 1.50$), 1055 (SA*1*)/1010
        total Mie scattering coefficients, 1055(SA*1*)/1010
      for standard air and Rayleigh scattering coefficients for region 0.2–20.0μ, 176
  resolution
    thermal air turbulence effect on, 1056(SA*16*)
  scattering
    back- — measurements, 113(TC*63*)
    light — and polarization of sky light, 484

sunlight from sky, clouds, and earth in 1–5μ range, 1045 (TA*17*)
total Mie — coefficients for spherical particles of real refractive indices ($1.33 \leq n \leq 1.50$), 1055(SA*1*)/1010
volume scattering function of light
recording polar nephelometer for measurements of, 113(TC*64*)
sky
infrared
emission spectra between 14.5μ and 22.5μ, 227
radiation reflected from sand and sea, 1045(TA*16*)
luminance values, 112(TA*13*)
polarization of — and light scattering in atmosphere, 484
solar
infrared
attenuation as function of water vapor, carbon dioxide, and ozone, 1055(SA*12*)
calculation of, 1055(SA*12*)
carbon dioxide, 1054(F*63*)
carbon monoxide, 1054(F*63*)
from 0.5–15μ, 223, 441(L)
measurements
at 17,000 feet, 1056(SA*15*)
with optical pyrometer, 113(TC*62*)
methane, 1054(F*63*)
nitrous oxide, 1054(F*63*)
ozone, 1054(F*63*)
over three horizontal sea-level paths, 1054(F*61*)
Universal Transmission Function (UTF), the line cluster model, 1054(F*64*)
water vapor, 1054(F*63*)
logarithmic dependence of transmission of "windows," 1055(SA*13*)
pure rotation band, 1054(F*62*)
absolute calculation, 1056(SA*14*)
stereoshadowgram experiments in lower atmosphere, 346 (SB*34*)
symposium on —, Boston University Physical Research Laboratories, September, 1956, 192(N)
transmission
field of view effect on — measurements, 1056(SA*19*)
haze and fog in spectral region 0.35 to 10μ, 491
image — by troposphere, 499
transmissometer
portable — for measuring transmission of beam of light through atmosphere, 113(TC*64*)
troposphere
image transmission by, 499
turbulence in lower atmosphere
optical observations of, 346(SB*32*)
water vapor
spectra in 20μ to 31.7μ region with pressure broadening, 1024
spectra in 29μ to 40μ region with pressure broadening, 1028

Atomic Spectra (see *Spectra*)

Automation (see also *Computers*)
measuring instruments and,
symposium on —, Düsseldorf, Germany, November, 1957, 569(N)

Axicons
optical properties and practical uses, 344(S*1*)

Barton, Henry A.
resigned as Director of the American Institute of Physics, 685

Bausch & Lomb Littrow Spectrograph
interchange of lens and prism mounts, 862(L)

Biberman, Lucien M.
appointed Director of Electronics Division of Chicago Midway Laboratories, 334(N)

Birefringence
piezo-
strontium titanate, 726

Bitter, Francis
appointed Associate Dean of School of Science, Massachusetts Institute of Technology, 193(N)

Boeder, Paul
appointed to American Optical Company Chair, University of Iowa, 1138(N)

symposium proceedings, 258(N)
Crystals
cadmium sulfide
refractive index for single synthetic — crystal in 0.55–1.4μ region, 240
calcium fluoride
ultraviolet transmission of — at low temperatures, 440(L)
dyes adsorbed
energy transfer, 1045(TB*3*)
germanium
refractive index of single-crystal — in 2–16μ region, 244
ideal
far infrared absorption, 342(FC*51*)
optical
physical properties of, 115(F*2*)
influence of structure on, 115(F*3*)
potassium iodide
oscillator strength of V_2 centers, 246
silicon
refractive index of single-crystal — in 1–11μ region, 244
stress optical study
stronium titanate, 726
strontium titanate
stress optical study, 726
uranyl salts
fluorescent lifetimes at different temperatures, 1092
zinc sulfide
refractive index for single synthetic — crystal in 0.44–1.4μ region, 240

DeLury, Ralph E.
necrology, 335(N)
Densitometer, Densitometry (see also *Microphotometer*)
corner cube interferometer applied to micro-, 340(TD*74*)
photo-
solar-blind, 1048(TC*67*)
reflection
optical unit for measuring, 1046(TB*31*)
Detectors
multiple-beam aplanatic, 439(L)
radiation
spectral response automatically recorded, 1048(TC*68*)
Diffraction
fraunhofer
of absorbing spheres
diameter and relative index determined with van de Hulst theory, 345(SA*18*)
image
formation theory
aberration effect on, 405
microwave frequencies, 428
by opaque strip
light source size and, 1074
polarizing microscope and — anomaly, 1051(FA*15*)
theory of, 569(B)
x-ray
of macromolecular substances with optical diffractometer, 1061
Diffraction Gratings (see *Gratings*)
Diffractometer
optical — for x-ray diffraction studies of macromolecular structures, 1061
two-beam interference with partially coherent light, 895
Dove Prism Viewer
space error in color matching, 121(SB*31*), 256(L), 571(E)

Ebert Spectrometer
slit function of — invisible and near-infrared, 629
Electronic Computers (see *Computers*)
Electroretinogram (see *Vision*)
Emission (see *Spectra* and *Sources*)
Emissivity
infrared
of terrain objects, 1045(TA*18*)
palladium spectral — at 0.665μ as function of temperature, 1052(FA*18*)
platinum spectral — at 0.665μ as function of temperature, 1052(FA*18*)
rhodium spectral — at 0.665μ as function of temperature, 1052(FA*18*)
thermal
cylindrical cavities, 926
total — of metals as function of temperature and angle, 341(TD*80*)
Errata (see *individual subject entries*)
443(E), 571(E), 767(E), 979(E)
Etalon
reflection
theory of — and accuracy of prediction of maximum and minimum intensities in fringe pattern, 132
Evaporograph
infrared imaging device, 340(TD*77*)
Eye (see *Vision*)

Films
absorbing
induced transmission in — applied to band pass filter design, 230
aluminum
evaporated
extreme ultraviolet reflectance of, 342(FC*53*)
effect of purity, substrate temperature, and aging conditions on, 342(FC*53*)
optical constants of — in vacuum ultraviolet, 120(SA*17*)
reflectance for aluminum K radiation, 165
ultraviolet reflectance, 1070
purity, substrate temperature, and aging conditions effect on, 1070
copper
reflectance for aluminum K radiation, 165
dielectric
multilayer
dispersion of phase change, 57
applied to interference filter, 57
quarter-wave stack
transmission and polarization of — at non-normal incidence, 1051(FA*16*)
gold
reflectance for aluminum K radiation, 165
luminescent
calcium fluoride, manganese activated, 300
calcium tungstate, tungsten activated, 300
zinc phosphate, manganese activated, 300
zinc silicate, manganese activated, 300
zinc sulfide, manganese activated, 300
magnesium
reflectance for aluminum K radiation, 165
magnesium fluoride
optical properties of — in ultraviolet, 662

Films (Continued)
metal
x-ray reflectivity, 987
aluminum, 987
beryllium, 987
chromium, 987
copper, 987
glass, 987
gold, 987
iridium, 987
nickel, 987
platinum, 987
silver, 987
titanium, 987
mirror
epoxy replica — produced by two-step method, 1052 (FA*19*)
multilayer
tellurium and rock salt as interference filter for infrared, 130
three-layer — and their infrared absorption, 575
paint
refractive index of, 337(TA*14*)/1118
rare earth fluorides in 220–1000 mμ region, 1051(FA*17*)
optical properties of, 1051(FA*17*)
rare earth oxides, in 220–1000 mμ region, 1051(FA*17*)
optical properties of, 1051(FA*17*)
semireflecting
phase condition for light incident normally on, 132
shadowing technique to produce optical parts, 342(FC*54*)
silicon monoxide
antireflection coating for silicon and germanium in near infrared, 1045(TA*15*)
silver
reflectance for aluminum *K* radiation, 165
solid
reflectance for aluminum *K* radiation, 165
thin
absorbing
multiple reflections within, 767(E)
optical properties of, 473
chromium, 473
gold, 473
sodium chloride, 473
Brewster angle apparatus for — index measurements, 62
dielectric, 469
refractive index of — measured by Brewster angle and by film reflectance, 469
calcium fluoride, 469
cryolite, 469
lithium fluoride, 469
magnesium fluoride, 469
zinc sulfide, 469
multilayer
calculations of reflectance and transmittance admittance charts in, 121(SA*18*)
polarimetric method of — measurements, 565(L)
properties of, 109(B)
electrical conductivity, 109(B)
magnetic, 109(B)
structure, 109(B)
thickness control of, 483
titanium evaporated on fused quartz and glass
optical properties and oxidation of, 125
titanium dioxide — as beam splitter, 668(L)
zinc sulfide
antireflection coating for silicon and germanium in far infrared, 1045(TA*15*)

Filters
band pass
induced transmission in absorbing films applied to design of, 230
combination of
resulting transmittance calculated with subtractive color mixture device, 1049(TD*82*)
infrared
interference, 130
interference
infrared, 130
multilayer
dispersion of phase change, 57
oblique — for nonparallel light, 342(FC*55*)/780
spatial — imagery
photographic edges as test objects, 1046(TB*34*)
Finkelstein, Isidore
joined Servo Corporation of America as physicist in electronics, 673(N)
Fluorescence (see *Luminescence* and *Phosphors*)
Foote, Paul D.
appointed Assistant Secretary of Defense, 1139(N)
Free Radicals
new section on — organized at the National Bureau of Standards, 329(N)
Furnace
solar
parabolic mirrors for
analysis of large aperture, 216

Gas
flow
analysis by interferential schlieren method, 703
General Electric Recording Spectrophotometer
integrating sphere
asymmetry of, 119(FD*86*)
tristimulus integrator
electronic digital — as accessory for General Electric Recording Spectrophotometer, 605
Germanium
refractive index of single-crystal — in 2–16μ region, 244
Gibson, Kasson S.
appointed Secretary of the Optical Society, 1957, 197(E)
Glass
arsenic trisulfide
refractive and dispersive properties of, 115(FA*11*)
fibers
field-flattening lens of, 117(FC*61*)/594
optics of, 117(F*51*)/413
dielectric cylinders and their optical properties, 117 (F*51*)/413
image transfer on static and dynamic scanning with fiber bundles, 117(FC*61*)/423
infrared transmitting, 567(L)
optical
gamma radiation insensitive, 73
selection of — in apochromats, 955
refractive index
relaxation effects in — following removal of high hydrostatic pressure, 343(FC*58*)
silicate
new theory of structure of, 115(F*4*)
Gloss
high- — surface
refractive index of opaque, 337(TA*14*)/1118
Glossmeter
improvements, 118(FD*81*)
Grating
Bausch and Lomb
double passing — and high resolution obtained, 631

diffraction
Babcock eight-inch
performance of — in large vacuum spectrograph, 6
eight inches in width ruled with interferometric control by 14-inch MIT ruling engine, 15
performance
random errors in positions of grating grooves, 339 (TD*71*)
double passing a
high resolution obtained, 631
resolution of
shrinkage effect in, 671(L)
ruling engine
accurate linear scales, 1

Hardy, Arthur C.
resigned as Secretary of the Optical Society, 1957, 197(E)
Harrison, George R.
received first Annual Award of Spectroscopy Society of Pittsburgh, 196(N), 259(N)
Herzberger, Max
elected to Bavarian Academy of Science, 673(N)
Hutchisson, Elmer
appointed new Director of the AIP, 685

Illumination
analog computer for prediction of brightness and — within an enclosure, 118(FD*83*)
effect of inclusions on, 118(FD*84*)
Image
aberration
effect on images of partially coherent objects, 405
coherence
intensity distribution and degree of, 976(L)
diffraction
at microwave frequencies, 428
of an edge
energy distribution calculated from energy distribution of a line, 344(SA*11*)
evaluation of, 507
information theory, communication theory, and encoding information, 507
fiber bundles
image transfer on static and dynamic scanning, 117 (FC*62*)/423
fibroscope for internal medical examinations, 117(FC*63*)
formation
diffraction theory of
effect of small aberrations on images of partially coherent objects, 405
nonrectified polarizing microscopes, 1051(FA*14*)
symposium on —, and its measurement with electronic techniques, Boston, Massachusetts, May, 1957, 348(N)
forming systems
quality criteria for, 345(SA*17*)
infrared
Evaporograph, imaging device, 340(TD*77*)
infrared photograph
Far Infrared Camera for, 340(TD*79*)
intensifier
solid-state, 341(F*4*)/887
of a line
energy distribution
calculated from energy distribution of an edge, 344 (SA*11*)
sine-wave response and, 345(SA*12*)
photographic
light distribution in, 566(L), 567(L)
quality
boil effect on, 1056(SA*17*)
evaluated in relation to receiver, 774
spatial filtered
photographic edges as test objects, 1046(TB*34*)
spot diagram
analyzed, 584
automatic data reduction of — information, 345(SA*14*)
symposium on — formation
measurement with electronic techniques, Boston, Massachusetts, May, 1957, 348(N)
telescopic systems
image quality, 345(SA*13*)
axial sine-wave response measured and calculated, 345(SA*13*)
instrument for measuring photoelectrically, 345(SA*13*)
transmission by troposphere, 499
Instruments
measurement of axial sine-wave response of aberrated telescope, 345(SA*13*)
measuring — and automation
symposium on —, Düsseldorf, Germany, November, 1957, 569(N)
selection of visually neutral photographic dye images, 1049(TD*84*)
Interference
Fabry-Perot — patterns in 1–2μ region of
helium I, 120(SA*15*)
krypton I, 120(SA*15*)
mercury I^{198}, 120(SA*15*)
opaque strip and light source size, 1074
schlieren
gas density measured quantitatively, 91
two-beam
partially coherent light, 895
Interferometer
common-beam
for optical testing, 386
corner-reflector
uncompensated, 250
Fizeau
design of compact wide aperture, 858
Hemstreet, 1050(FA*11*)
horizontal Mach type
visualization of flows in wind tunnels, 703
infrared
Fabry-Perot scanning, 120(SA*11*)
inverting
testing of mirrors, lenses, 120(SA*12*)
Michelson type
corner cube
applied to microdensitometer, 340(TD*74*)
line standard calibration, 340(TD*73*)
moire-fringe
contour measurements with, 120(SA*13*)
oblique
testing of relatively poor surfaces, 120(SA*14*)
parallel test, 1051(FA*12*)
gauge blocks measured without wringing operation, 1051(FA*12*)
schlieren system
visualization of flows in wind tunnels, 703
Interferometry
coherence theory applied in, 508
flow visualization in wind tunnel, 703
Hartman Formula
constants of — and correction curve by IBM calculation, 862(L)

Interferometry (Continued)
infrared

multiple-beam, 119(S*1*)
two-beam, 119(S*1*)
of living cells, 545
moving mirrors and photoelectric detection, 339(TD*72*)/1097
fringe "visibility" and effective length corrections, 339(TD*72*)
standards of wavelength
iodine absorption, 120(SA*16*)
krypton I, 120(SA*15*)
mercury-198, 120(SA*15*)
secondary and tertiary
CO relative to Hg 198 green line, 144
HCN relative to Hg 198 green line, 144
International Commission on Optics
symposium on "Frontiers in Physical Optics," Boston, March–April, 1956, 445
papers published in June 1957 issue of *JOSA*, 445
International Geophysical Year
annals of —, new journal published by Pergamon Press, Ltd., 978(N)
aurora and airglow study, 111(T*2*)
earth satellite
optical tracking of IGY, 1047(T*52*)
Baker-Nunn Schmidt cameras, 1047(T*52*)
detection
effect of angular motion on threshold for, 1047(TC*61*)
research program for, 111(T*1*)
satellite and optical problems, 111(T*3*)/261
spectrographs
Auroral Patrol, 1048(TC*65*)
Intersociety Color Council
annual meeting, New York, March, 1957, 196(N)
Godlove Award
Deane B. Judd, first recipient, 673(N)
newsletter
Eugene Allen resigned as editor, 1957, 260(N)
Warren Rhodes, new editor, 1957, 260(N)

Jarrell-Ash Company
brochure on spectrochemical analysis, 570(N)
Jarrell-Ash Console Comparator Microphotometer
high screen intensity and null-ratio measurement system, 306
Joint Commission for Spectroscopy
transactions of Columbus meeting, June, 1956, 1035(N)
Journal of Molecular Spectroscopy
new journal published by Academic Press, Incorporated, 672(N)
Journal of Ultrastructure Research
new journal published by Academic Press, Incorporated, 866(N)
Judd, Deane B.
first recipient of Godlove Award of the Inter-Society Color Council, March, 1957, 673(N)
named assistant chief of Optics and Metrology Division, National Bureau of Standards, 979(N)

Kenney, Arthur W.
retired from Chemical Department, E. I. du Pont de Nemours & Company, 259(N)
Krumhansl, James A.
new editor of *Journal of Applied Physics*, 1138(N)

Lamps
fluorescent
band system for appraisal of color rendition, 121(SB*33*)
Lens
aberration
automatic correction of residual, 1104
balancing of — in combination with receiver, 774
chromatic
secondary — of several thin lens designs, 1135(L)
photographic resolving power variation with lateral, 1018
of thin, 257(B)
third-order — theory for varifocal systems, 579
apochromatic system
optical glass selection for, 955
arsenic trisulfide
interchangeable *f*/1.0 re-imaging system for infrared, 116(FA*12*)
design
automatic, 345(SA*15*)
correction of residual aberration, 1104
methods, 902
optical merit function calculated and its derivatives with respect to system parameters, 913
symposium on — with digital computers, proceedings of, 258(N)
fiber
transparent — as field-flattening lens, 117(FC*61*)/594
field-flattening — of bundle of dielectric cylinders, 117(FC*61*)/594
glass fiber
field-flattener of, 117(FC*61*)
image
errors analyzed, 584
quality evaluated in relation to receiver, 774
microwave
diffraction images studied, 428
objectives
photographic
Petzval type, 1135(L)
chromatic aberration of, 1135(L)
spectrographic
f/2.0, 9-inch ultraviolet transmission — of 100% fused silica, 117(FC*64*)
resolution
theoretical limit of, 667(L)
spectacle
skew astigmatism at toric surfaces, 599
stigmatic system of concentric type, 566(L)
test charts
sinusoidal — produced, 103(L)
testing of — with inverting interferometer, 120(SA*12*)
varifocal — system
third-order aberration theory for, 579
Light
coherence theory
interferometry and, 508
microscopy and, 508
and the quantum, 527
partial coherence, 466
scattering
by colloidal systems, 977(B)

in physical chemistry, 257(B)
sunlight by sky, clouds, and earth in 1–5μ region, 1045(TA*17*)
sources
advances in production of, 113(T*52*)
velocity of
derived from band spectrum method, 686
determined by band spectrum method, 148
wave theory versus rays, 466

Light and Lighting
reprints of article on church lighting feature available (June, 1956), 110(N)
Liquids
Brillouin scattering
validity of Landau Placzek relationship, 103(L)
flow double refraction in
position of optic axes in, 765(L)
refractive indexes in infrared by critical angle refractometry, 782
Lowry, Erwin F.
necrology, 442(N)
Luminance (see also *Brightness*)
analog computer for prediction of brightness and illumination within an inclosure, 118(FD*83*)
sky — values, 112(TA*13*)
Luminescence
cathode screen
bilayer bichromatic, 790
color centers, 191(B)
electro-
devices for forming and holding images, 1050(F*1*)
infrared quenching of, 765(L)
trapping action in zinc sulfide phosphors, 341(F*3*)/881
fluorescence
of uranyl salts at different temperatures, 1092
whitening agents
relative efficiency measured, 933
of minerals
irradiation colors, 191(B)
polyacene solid solutions, energy transfer, 866(N)
bibliography of, 866(N)
solid-state light amplifiers, 341(F*4*)/887
symposium
Optical Society meeting, March, 1957, 196(N)
papers published, 869
thermoluminescence
milliroentgen dosimetry with, 1136(L)
trapping levels
energy position
Garlick and Gibson method analyzed, 649

Macroscopy
interference
polarization apparatus for — of isotropic transparent objects, 528
Magnifier
rating and prescribing — for partially blind, 719
Mann, David E.
necrology, 1042(N)
Mees, C. E. K.
elected to honorary membership in Optical Society of America, 1957, 773
Metals
emissivity of
total — measured as function of temperature and angle, 341(TD*80*)
gallium (liquid)
optical properties of — in 0.23–13μ region, 64
mercury (liquid)
optical properties of — in 0.23–13μ region, 64
Metrology
symposium on —, Belgian Committee on Optics, International Commission on Optics, 766(N)
Microphotometer (see also *Densitometer*)
Jarrell-Ash console comparator — with high screen intensity and null-ratio measurement system, 306
Microscope (see also *Microscopy*)
high power
focusing of — based on a new principle, 76
automatic and accurate, 76
interference
A. O. Baker
half-shade eyepieces for, 1051(FA*13*)
design of, 557
sensitivity of — and test objects, 563
phase contrast
sensitivity of — and test objects, 563
polarizing
diffraction anomaly in, 1051(FA*15*)
image formation by nonrectified, 1051(FA*14*)
Microscopy (see also *Microscope*)
coherence theory
applied in, 508
interference
immersion refractometry of living cells, 545
polarization apparatus for — of isotropic transparent objects, 528
scanning
diameter of opaque cylinders measured, 186
polystyrene, 186
systematic errors in, 186
Wollaston wire, 186
Middleton, W. E. Knowles
awarded honorary degree, Boston University, 866(N)
Mirrors
parabolic
large aperture — for solar furnaces analyzed, 216
replica
reproduction of — by two-step process with epoxy resins, 1052(FA*19*)
testing of — with inverting interferometer, 120(SA*12*)
toroidal
production of — by mechanical bending, 1057(SB*35*)

National Bureau of Standards
Free Radicals Section organized, 329(N)
National Science Foundation
publications available, 1042(N)
Necrology
DeLury, Ralph E., 335(N)
Lowry, Erwin F., 442(N)

Phosphorescence (see *Luminescence* and *Phosphors*)
Phosphors
alkali halide
luminescent centers in, 341(F1)/869
calcium sulfate, manganese activated
dosimetry device, 1136(L)
electron trap depths
determination of, 342(FC52)/881
Garlick and Gibson method analyzer, 649
emission
activator environment and its influence on spectral, 341(F2)/877
infrared stimulated
rise and decay times measured, 440(L)
apparatus for, 440(L)
potassium chloride, thallium activated, 341(F1)/869
zinc sulfide
copper, lead activated — in melamine alkyd base
infrared quenching of, 765(L)
luminescent centers in, 341(F1)/869
trapping action in electroluminescent, 341(F3)/881
Photocells
solar-blind ultraviolet, 1048(TC67)
Photoelectric Spectrometry Group
symposium on spectrometry and kinetic studies, Cambridge, England, March, 1957, 260(N)
Photographic Emulsions
color
film neutrals
instrument for selecting, 1049(TS84)
visual selection, 1049(TD85)

density
fluctuations
experiment and Selwyn theory, 975(L)
optical unit for measuring reflection, 1046(TB*32*)
detail rendition
as function of exposure time, 1046(TB*32*)
dye images
instrument for selecting visually neutral, 1049(TD*84*)
granularity
autocorrelation and, 321
objective measurement of graininess, 312
photoelectric scanning instrument for, 312
image
light distribution in, 566(L), 567(L)
information speed of Kodak Tri-X and Kodak Panatomic-X Films, 1046(TB*33*)
reciprocity failure
low-temperature — and temperature dependence of sensitivity, 843
resolving power of Super-XX film
variation with lateral chromatic aberration, 1018
Super-XX film
resolving power
variation with lateral chromatic aberration, 1018
Photography
aerial
detection and recognition of, 1047(TC*62*)
image size
liminal — for conventional film readers, 1048(TC*64*)
color
reproduction, 1049(TD*83*)
flame temperature measurements with photographic technique, 1058(SB*39*)
image
spatial filtered
test objects of photographic edges, 1046(TB*34*)
infrared
far — thermal
instrument for, 340(TD*79*)
optics of, 109(B)
picture correlator
efficient use of, 327(L)
process, book on, 441(B)
reproduction
shape and size constancy, 658
resolution
turbulence effect on, 755
sensitization
energy transfer between crystals and adsorbed dyes, 1045(TB*3*)
sequence exposures
instrument for automatic recording of, 758
stereoscopy
Lippmann's integral method
suppression of multiple images in, 104(L)
symposium on — sensitivity
proceedings of —, Japan, September, 1953, 865(B)
Photokeratoscope
with hemispherical object surface, 221
contour of entire corneal surface of eye recorded in one photographic exposure, 221
Photometer, Photometry
cavity
cylindrical
effective thermal emittance of, 926
infrared
stellar — and preliminary measurements, 340(TD*76*)
narrow-bandpass
night airglow emission lines, λ5577 (OI), 111(TA*11*)
sources
incandescent filaments
modulation of radiant energy from, 101
Physics
Annals of —, a new monthly journal, 258(N)
nuclear
optical methods and, 446
The Physics of Fluids
new journal published by the American Institute of Physics, 978(N)
Polarization (see also *Light*)
apparatus
for interference microscopy and macroscopy of isotropic transparent objects, 528
atoms optically excited by, 460
radio-frequency resonance detected, 460
and sensitive color, 1121
Potassium Iodide
oscillator strength of V_2 centers in — crystals, 246
Pressure
apparatus for optical studies at very high, 1015
Pyrometer, Pyrometry
atmospheric transmission measurements with optical, 113 (TC*62*)
cavity
cylindrical
effective thermal emittance of, 926
low temperature, 1000
optical — below red heat, 1005
photoelectric, 1058(SB*38*)

Radiance
distribution in natural hydrosols, 1046(TB*35*)
spectral
sky clouds and earth in 1–5μ range in day time, 1045 (TA*17*)
submarine light fields
distribution as function of depth, 1046(TB*37*)
experimental and computed path, 1046(TB*36*)
transfer
divergence of light field in optical media, 1055(SA*11*)
Radiation, Radiant Energy (see also *Light*)
blackbody
absolute method of radiometry, 114(TC*66*)/748
pyrometry with dark-adapted eye below red heat, 1005
emissivity
total — of metals as function of temperature and angle, 341(TD*80*)
gamma
optical glasses insensitive to, 73
infrared
detection by high-speed radiometer, 340(TD*78*)
Evaporograph, imaging device, 340(TD*77*)
high-speed, 340(TD*78*)
scattering coefficient
wavelength dependence in natural haze, 345(SB*31*)
sky
reflected from sand and sea, 1045(TA*16*)
scattering of
Mie — coefficients
spherical particles
refractive index $n \sim 1.0$, 603
refractive indices $(1.33 \leq n \leq 1.50)$, 1055(SA*1*)/1010
by spherical particle and angular distribution coefficients, 81

Radiation, Radiant Energy (Continued)
solar
parabolic mirrors for collection of, 216
analysis of large aperture, 216
Radiator
multiple-beam aplanatic, 439(L)
Radiometer, Radiometry
absolute — based on change in electrical resistance, 114 (TC*66*)/748
Range Finders
accuracy of — improved by order of magnitude, 565(L)
utility
evaluation of, 1058(SB*40*)
Ray Tracing
automatic, 345(SA*16*)/736
point-by-point computation of aspheric surfaces and, 1053 (FB*44*)
refraction operators and — through cones of constant index, 85
spot diagrams
analyzed, 584
symposium on optical design with digital computers, proceedings of 258(N)
Reciprocity Law (see *Photographic Emulsions*)
Reflectance
aluminum, evaporated, in vacuum ultraviolet, 120(SA*17*)/1070
diffuse
method using opal glass to diffuse light beam, 172
in visible and infrared measured with automatic recording reflectometer, 995
films
titanium, 125
metal surfaces
asymmetry of General Electric Recording Spectrophotometer integrating sphere, 119(FD*86*)
solids
for aluminum K radiation, 165
Reflectivity, Reflection (see also *Reflectance*)
alloys, liquid in 0.3μ to 10μ regions
calculated and experimental values compared, 70
gallium-indium, 70
mercury-indium, 70
mercury-thallium, 70
Drude theory
liquid alloys of mercury-indium, mercury-thallium, gallium-indium, 70
liquid mercury and liquid gallium, 64
gallium, liquid, in 0.23μ to 13μ region, 64
mercury, liquid, in 0.23μ to 13μ region, 64
spectral specular — at grazing incidence from rough surfaces, 336(TA*12*)/1020
total- — theory, 569(B)
x-ray
from condensed metal films, 987
Reflectometer
infrared
solar absorptivity based on weighted ordinate integration, 1048(TC*66*)
visible and infrared
automatic recording — for diffuse reflectance of living tissue, 995
Refraction
atmospheric
over water, 113(TC*61*)
flow double
position of optic axes in liquid showing, 765(L)
Snell's law
dyadic representation of — derived, 85
ray tracing through cone of constant index, 85
of sunlight
by ocean waves, 653
Refractive Index
arsenic trisulfide glass, 115(FA*11*)
cadmium sulfide
single synthetic — crystal for region 0.55–1.4μ, 240
germanium
single-crystal in 2–16μ region, 244
glass
relaxation effects in — following removal of high hydrostatic pressures, 343(FC*58*)
high-gloss dielectric surface, 1118
liquids
infrared — by critical angle refractometry, 782
photorefractometer for determination of, 1057(SB*37*)/1109
of living cells, 545
immersion method and interference microscopy, 545
method for measuring — in infrared region
thermocouple with KBr or CaF_2 windows, 240
Mie scattering coefficient K for spherical particles of real — ($1.33 \leq n \leq 1.50$), 1055(SA*1*)/1010
minimum duration
with absorbing prisms, 116(FA*14*)
opaque high-gloss surfaces, 337(TA*14*)
selenium glass
modified — in 1–14μ region, 244
silicon
single-crystal in 1–11μ region, 244
Snell's Law
with absorbing media, 116(FA*13*)
tables of — for standard air and Rayleigh scattering coefficient between 0.2 and 20.0μ
applied to atmospheric optics, 176
thin films
Brewster angle apparatus, 62
zinc sulfide
single synthetic — crystal for region 0.44–1.4μ, 240
Refractometer
critical angle
infrared dispersion of liquids, 782
differential
for gases and liquids, 536
photo-
using dielectric cylinders, 1057(SB*37*)
slight changes in refractive index of liquid, 1057 (SB*37*)/1109
Refractometry
critical angle
infrared dispersion of liquids by, 782
immersion — of living cells, 545
and interference microscopy, 545
of living cells, 545
Resolution
and acoustic lenses, 564(L)
grating
shrinkage effect in, 671(L)
high — obtained by double passing Bausch and Lomb grating, 631
photographic
turbulence effect on, 755
theoretical limit of, 667(L)
Resonance
magnetic
optical methods of atomic orientation, 460
radio-frequency
optical detection of, 460
Richardson, Earl E.
retired from Eastman Kodak Research Laboratory, 334(N)

Ruling Engine
electronically controlled
random errors in groove position, 339(TD*71*)
diffraction grating performance, 339(TD*71*)
MIT 14-inch
diffraction gratings up to 8 inches in width ruled with interferometric control, 15
scales, accurate and linear ruled on grating engine, 1

Scale
anti-parallax, 343(FC*56*)
Scattering
Brillouin — in liquids
validity of Landau Placzek relationship, 103(L)
hydrosol
coefficient measured using modified General Electric recording spectrophotometer, 343(FC*59*)
infrared radiation in natural haze
wavelength dependence of scattering coefficient, 345 (SB*31*)
light
by colloidal systems, 977(B)
low-angle — and optical clarity measured, 118(FD*85*)
in physical chemistry, 257(B)
sunlight by sky, clouds, and earth in 1–5μ region, 1045(TA*17*)
Mie — coefficient K
spherical particles
refractive index $n \sim 1.0$, 603
refractive indices ($1.33 \leq n \leq 1.50$), 1055(SA*1*)
tables for, 1010
of radiation by spherical particle
angular distribution coefficients, 81
Rayleigh — coefficient
for standard air, 176
water
nephelometer for underwater measurements, 346(SB*36*)
volume scattering of natural waters
monochromatic measurement of, 745
Schlieren System
gas density measured quantitatively by means of light interference in, 91
Silicon
refractive index of single-crystal — in 1–11μ region, 244
Silver Chloride
windows in infrared spectroscopy and technique for polishing, 328(L)
Slit
function of Ebert spectrometer in visible and near-infrared, 629
Smith, Francis A.
retired from National Bureau of Standards, 1138(N)
Smith, Thomas
elected to honorary membership in Optical Society of America, 1957, 773
Society for Applied Spectroscopy
New York section
meetings for 1957, 110(N), 348(N)
Philadelphia section
meetings for 1957, 110(N)
Sources
discharge
coaxial — of approximately 40 million candles/cm^2, 981
electrodeless
rare earth and heavy element halides, 1087
thorium-halide
secondary wavelength standards from, 1057(SB*31*)
hydrogen
for vacuum ultraviolet, 646
iron hollow-cathode, 118(FC*66*)
identification of spectra, 118(FC*66*)
low pressure
emission of light of minimum noise, 985
pulse lamp with coaxial capacitor, 981
light
advances in production, 113(T*52*)
photoelectric polarimeter, 119(FD*87*)
radioactive — for photometric standardization, 118 (FD*82*)
size and influence on diffraction by opaque strip, 1074
submicrosecond- source of 40 million candles/cm^2, 981
capacitor-discharge gap with toroidal capacitor surrounding gap coaxially, 981
Sylvania glow modulator tube as light flash source in physiology, 30
tungsten
spectral intensity of ac operated, 1135(L)
thermal radiators
incandescent filaments
modulation of radiant energy from, 101
Spark (see *Sources, Spectra*)
Spectacle
lens
skew astigmatism at toric surfaces, 599
Spectra
optical cross section of spectral line
intensity-density measurements, 156
interaction between excited atom and foreign molecules, 151
Atomic, Absorption, Infrared
iodine, 120(SA*16*)
Atomic, Emission, Infrared
helium I, 120(SA*15*)
krypton I, 120(SA*15*)
mercury
isotope shift for mercury 198 and mercury 202, 297
mercury I^{198}, 120(SA*15*)
Atomic, Emission, Ultraviolet, Visible
americium I and americium II, 1076
term analysis of, 1076
copper II as provisional standard in vacuum ultraviolet, 182
germanium, $^5S_2^\circ$ term, 850
helium, vacuum region, 337(TB*31*)
hydrogen
Doppler slant lines in axial discharge in magnetic field, 863(L)
iron II as provisional standard in vacuum ultraviolet, 182
iron using a hollow-cathode discharge, 118(FC*66*)
manganese II, new atomic energy levels, 852
mercury
isotope shift for mercury 198 and mercury 202, 297
Hg II and Hg III, 337(TB*32*)
isotopic purity of mercury-198 produced by neutron irradiation of gold-197, 1032
neon, 744–100A, 105(L), 337(TB*31*)
thorium, 1057(SB*31*)
Molecular, Absorption, Infrared
ammonia, 950 cm^{-1}, 689
benzene, 673 cm^{-1}, 689
carbon disulfide, 400 cm^{-1}, 689
carbon monoxide 2–0 band, 686
carbonyl sulfide vibration-rotation bands, 1044(TA*12*)
ethylene, 950 cm^{-1}, 689
far
analytical applications, 1044(TA*2*)
linearizing — by using cams for Perkin Elmer Model 21 in Model 13, 636

Spectra (Continued)
methyl acetylene vibration-rotation bands, 1044(TA*12*)
punched card index available from American Society for Testing Materials, *672*(N)
silica, 163
water vapor 1600, 300, and 200–55 cm^{-1}, 689
water vapor pure rotation band, 1054(F*62*)
Molecular, Absorption, Ultraviolet, Visible
polonium 208–polonium 209 isotopic analysis, *291*
punched card index available from American Society for Testing Materials, *672*(N)
Molecular, Transmission, Infrared
water vapor
20μ–31.7μ region with pressure broadening, 1024
29μ–40μ region with pressure broadening, 1028
Raman
absolute intensities, 568(L)
Zeeman Effect
gadolinium chloride ($GdCl_3 \cdot 6H_2O$), 944
erbium, 337(TB*33*)
Spectrochemical Analysis
brochure on basic fundamentals of —, Jarrell-Ash Company, 570(N)
powdered samples of unknown origin, 381
modified dilution method, 381
x-ray
standards
low-alloy steel (British Bureau of Analysed Samples), 110(N)
Spectrograph
Auroral Patrol — for IGY, 1048(TC*65*)
grating
astigmatism elimination, 625
far-infrared, 18–800μ, constructed, 1045(TA*13*)
fast quartz, 1057(SB*32*)
plane
anomalous aberrations, 1057(SB*33*)
with calcium fluoride camera corrector lens for 12 000 A to 1500 A region, 23
separation of overlapping orders of concave — in vacuum ultraviolet, 625
toroidal
Lyman-alpha solar disk photography, 1057(SB*36*)
objective
f/2.0, 9-inch ultraviolet transmission — of 100% silica, 117(FC*64*)
solar
Babcock grating (eight-inch) performance in large vacuum, 6
time-resolved, 117(FC*65*)
Spectrometer, Spectrometry, Spectrophotometry, Spectrophotometer (see also *Photometer*)
aerial photoreconnaissance and, 1050(TD*88*)
courses on — and color measurement, Davidson and Hemmendinger, 1957, 766(N)
Ebert
slit function of — in visible and near infrared, 629
errors
chromatic significance of, 766(L)
grating
infrared, 358
far — spectroscopy with, 340(TD*75*)
5–200 microns range, 689
vacuum — at Ohio State University, 1044(TA*12*)
infrared
far
analytical applications, 1044(TA*2*)
grating, 358
vacuum — at Ohio State University, 1044(TA*12*)
interferometric of Fabry-Perot type, 642
interferometric
Fabry-Perot type
infrared region, 642
mass
symposia
Fifth Meeting, American Society for Testing Materials, New York, May, 1957, 329(N)
Panel of Hydrocarbon Research Group (Institute of Petroleum) and Committee E-14 of the American Society for Testing Materials, London, September, 1958, 1138(N)
high pressure
cells for, 1015
ratio-recording
attachment
simple logarithmic, 378
for Johns Hopkins 100-foot absorption cell, 367
resolution
signal to noise ratio and aperture compensation, 1057 (SB*34*)
scattering
monochromatic measurement of volume — of natural waters, 745
symposium
and kinetic studies, Photoelectric Spectrometry Group, Cambridge, England, March, 1957, *260*(N)
Spectropolarimeter
photoelectric
light sources for, 119(FD*87*)
Spectroscopy
absorption
Coproporphyrin Type I, 1044(TA*11*)
infrared and ultraviolet
punched card indexes, *672*(N)
molecular
organic chemical application of, 329(B)
applied
Third Ottawa Symposium on — sponsored by the Canadian Association for Applied Spectroscopy, September, 1956, 192(N)
Fourth Ottawa Symposium on — sponsored by the Canadian Association for Applied Spectroscopy, September, 1957, 329(N)
electron paramagnetic resonance
nuclear magnetic and —, course, Varian Associates, Palo Alto, California, October, 1957, 978(N)
emission
industrial — course at Boston College, July, 1957, 442(N)
fluorescence
Coproporphyrin Type I, 1044(TA*11*)
infrared
far, 119(S*1*)
Ives Medal Address by John Strong on, 354
with small grating spectrometer, 5–200μ, 340(TD*75*)
Fisk University Annual — Institute, August, 1957, *672*(N), 767(N)
with small grating spectrometer, 689
large particles, especially plastics, 193(N)
summer courses on technique and applications of —, Massachusetts Institute of Technology, June, 1957, 330(N), 348(N)
windows of silver chloride and technique for polishing, *328*(L)
interference
International Colloquium on —, Centre National de la Recherche Scientifique, September, 1957, 572(N)
molecular
Journal of, *672*(N)
symposium
conference on —, Institute of Petroleum, London, February, 1958, 978(N)

New England — Society, information on, 570(N)
nuclear magnetic resonance
electron paramagnetic and —, course, Varian Associates, Palo Alto, California, October, 1957, 978(N)
optics and
Russian journal, 572(N)
solar
high resolution — with large vacuum spectrograph with Babcock grating, 6
symposia
applied
Third Ottawa Symposium on — sponsored by the Canadian Association for Applied Spectroscopy, September, 1956, 192(N)
Fourth Ottawa Symposium on — sponsored by the Canadian Association for Applied Spectroscopy, September, 1957, 329(N)
infrared
Eighth Annual Institute, Fisk University, Nashville, Tennessee, August, 1957, 672(N)
International Colloquium on Interferential —, Centre National de la Recherche Scientifique, September, 1957, 572(N)
molecular
Institute of Petroleum, London, February, 1958, 978(N)
Ohio State University, June, 1957, 124(N), 348(N)
Seventh International Colloquium, Liège, Belgium, September, 1958, 442(N)
Western Association meeting, U.C.L.A., January, 1957, 124(N)

Sphere
diffraction patterns of absorbing
diameter and relative index determined with van de Hulst theory, 345(SA*18*)
integrating
General Electric Recording Spectrophotometer — and its asymmetry, 119(FD*86*)

Standards
color — for paint
new federal, March, 1956, 330(N)
radioactive light sources, 118(FD*82*)
photometry
wavelength
interferometric
iodine absorption, 120(SA*16*)
krypton, 120(SA*15*)
mercury-198, 120(SA*15*)
isotopic purity of — produced by neutron irradiation of gold-197, 1032
provisional — for vacuum ultraviolet,
Ca II, 182
Fe II, 182
secondary and tertiary
CO $R(18)$ line relative to Hg-198 green line, 144
CO 2–0 band relative to $R(18)$ line, 686
derived wavelength standards for 1–0 band of CO, 686
HCN relative to Hg-198 green line, 144
thorium, 1057(SB*31*)
x-ray
spectrochemical analysis
low alloy steel (British Bureau of Analysed Samples), 110(N)

Strong, John Donovan
Frederic Ives Medalist for 1956, 349, 354

Strontium Titanate
stress-optical study of, 726

Sun
book on, 1137(B)

Surfaces
aspheric
point-by-point computation of — and ray tracing, 1053(FB*44*)
Wasserman-Wolf method for designing, 669(L)
testing of relatively poor — with an oblique interferometer, 120(SA*14*)

Symposia
atmospheric optics, Boston University Physical Research Laboratories, September, 1956, 192(N)
color
visual problems of —, National Physical Laboratory, England, September, 1957, 766(N)
report on, 1054(F*51*)
computers, Western Joint Computer Conference, Los Angeles, February, 1957, 124(N)
image formation
measurement with electronic techniques, Boston, Massachusetts, May, 1957, 348(N)
luminescence
Optical Society of America meeting on, March, 1957, 196(N)/869
measuring instrumentation and automation, Düsseldorf, Germany, November, 1957, 569(N)
metrology, Belgian Committee on Optics, International Commission on Optics, 766(N)
optical design
proceedings of — with digital computers, 258(N)
photoelectric spectrometry and kinetic studies
Cambridge, England, March, 1957, 260(N)
photographic sensitivity
proceedings of —, Japan, September, 1953, 865(B)
physical optics
International Commission of Optics, March–April, 1956, 445
papers published in June, 1957, issue of the Journal of the Optical Society of America, 445
scientific information
sponsored by National Science Foundation, National Academy of Sciences-National Research Council, and American Documentation Institute, Washington, D. C., November, 1958, 258(N)
spectrometry
Fifth Meeting on Mass —, American Society for Testing Materials, New York, May, 1957, 329(N)
Panel of Hydrocarbon Research Group (Institute of Petroleum) and E-14 Committee of American Society for Testing Materials, London, September, 1958, 1138(N)
spectroscopy
analytical chemistry and
conference in Pittsburgh sponsored by the Spectroscopy Society of Pittsburgh and Analytical Chemistry Group, March, 1957, 196(N)
applied
Third Ottawa Symposium on — sponsored by the Canadian Association for Applied Spectroscopy, September, 1956, 192(N)
Fourth Ottawa Symposium on — sponsored by the Canadian Association for Applied Spectroscopy, September, 1957, 329(N)
infrared
Fisk University Annual — Institute, Nashville, Tennessee, August, 1957, 672(N), 767(N)
interference
International Colloquium on —, Centre National de la Recherche Scientifique, September, 1957, 572(N)
molecular
Institute of Petroleum, London, February, 1958, 978(N)
Ohio State University, June, 1957, 124(N), 348(N)

Symposia (Continued)
New England Society, 570(N)
Seventh International Colloquium, Liège, Belgium, September, 1958, 442(N)
Western Spectroscopy Association meeting, U.C.L.A., January, 1957, 124(N)
television
color
physical problems of —, International Union of Pure and Applied Physics and UNESCO, Paris, July, 1957, 442(N)
transistor and solid state circuit conference, University of Pennsylvania, February, 1957, 110(N)
vision
color
discrimination in animals and man and fundamental mechanisms, 1042(N)
National Physical Laboratory, England, September, 1957, 766(N)
report on, 1054(F*51*)

Technical Calendar
110, 193, 259, 335, 442, 570, 674, *767*, 867, 979, 1043, 1139
Teele, Ray P.
elected Fellow of Illuminating Engineering Society, 1138(N)
Telescope
history of, 191(B)
Television
color
symposium on physical problems of —, International Union of Pure and Applied Physics and UNESCO, Paris, July, 1957, 442(N)
Temperature
flame
photographic technique for measuring — in luminous rocket-exhaust flames, 1058(SB*39*)
liquid nitrogen
optical measurement technique at, 1034(L)
measurement
pyrometry at low temperatures, 1000
Transmission (see also *Transmittance*)
atmospheric
optical pyrometer measurements, 113(TC*62*)
infrared
of atmosphere in 0.5–15μ, 223
Transmissometer
atmospheric optics measurements, 113(TC*64*)
Transmittance (see also *Transmission*)
films
titanium, 125
sheet materials, primarily plastics, 785
Transistors
conference on — and solid state circuits, University of Pennsylvania, February, 1957, 110(N)
108(B)

Vision
accommodation
measurements in empty visual fields, 112(TB*31*)/714
variability of — during steady fixation at various levels of illuminance, 1053(FB*34*)
acuity
contrast thresholds for maintained vision and retinal image motion, 740
detection threshold
target size and shape and neural mechanisms, 1054(F*53*)
flashing light signals
variation effects among frequency, duration, and contrast of signals, *27*
stereoscopic
duration of stimuli, 343(FD*71*)
target size and shape, 114(TD*82*)
continuous foveal
at moderate background luminance, 114(TD*82*)
zero background luminance, 114(TD*83*)
literature survey on, 115(TD*84*)
adaptation
characteristic vectors of sensitivity data, 1053(FB*42*)
chromatic
human electroretinogram elicited by change in wavelength of stimulation, 208
luminance required for constant brightness dependent upon, 338(TC*51*)
dark
absolute threshold in pigeon, 827
luminance threshold
rods and cones and their relative importance, 198
pre-exposure changed, 287
pyrometry below red heat, 1005
receptors of the eye
luminance threshold and relative importance of, 198
test stimulus effect on measurement of, 344(FD*74*)
threshold and responses of the human visual system, *275*
light
contrast thresholds for moving point sources, 612
measurement of — of rods, 391
sensitivity increases with increased, 344(FD*75*)
threshold in pigeon, 827
red
effect of — on blue-green colors, 1052(FB*31*)
Aniseikonia
seminar on —, American Optical Company, Southbridge, Massachusetts, October, 1957, 978(N)
binocular visual space
convergence function
experimental, 805
theory, 795
blind
new methods of rating and prescribing reading aids for partially, 112(TB*32*)
book on, 977(B)
color
appearance predicted with different adaptation illuminations, 35, 443(E)
book review, 571(E)
critical — fusion frequency as function of chromaticity difference, 1130
defective
achromat
photopic receptors, 1052(FB*32*)
blue mono-cone monochromacy, 338(TC*54*)
differences
compared with instrumental measurements of painted panels, 337(TA*15*)
discrimination
color metric coefficients and, 122(SB*35*)
of 12 observers, 137
symposium on — in animals and man and fundamental mechanisms, Paris, 1958, 1042(N)
luminosity functions of two observers for point sources, 116(FB*32*)
matching
space error in, 121(SB*31*)/959
Dove prism viewer for investigating, 256(L), 571(E)
successive and simultaneous — compared, 43, 979(E)

perception
and discrimination, 116(FB*33*)
foveal fields (small), 116(FB*33*)
peripheral
techniques in the study of, 338(TC*55*)
preference for natural objects, 116(FB*31*)
red-adaptation effect on blue-green colors, 1052(FB*31*)
selection classified, 336(T*3*)
sensitivity functions and characteristic vectors of data, 1053(FB*42*)
space error in color matching, 121(SB*31*)/959
spacing, 336(T*1*)
temporal factor in, 336(T*2*)
spectral sensitivity in different retinal locations and with two sizes of foveal stimulus, 707
stability of — matching, 339(TC*57*)
symposium on —, National Physical Laboratory, England, September, 1957, 766(N)
report on, 1054(F*51*)
theory of, 35
opponent-colors, 116(FB*33*)
anomalous trichromatic color vision analyzed, 116 (FB*34*)
trichromatic
anomalous — analyzed in terms of opponent-colors theory, 116(FB*34*)
color naming experiments for red and green monochromatic lights, 834
cornea
contour of — photographed with photokeratoscope with hemispherical object surface, 221
course on — and refraction, American Optical Company, Southbridge, Massachusetts, October, 1957, 978(N)
defective
partially blind
rating and prescribing magnifiers for, 719
eye
human
axial chromatic aberration of, 564(L)
electro-mechanical model of — system, 205
kinematics of, 967
response of — to changes in wavelength stimulation, 208
rod-process and suprathreshold light stimuli, 822
spatial or temporal gradient of luminance, 639
involuntary — movements
visual effects of, 1054(F*52*)
movements
physiological nystagmus in cats, 112(TB*33*)
pupil
effect of size of — on intensity distribution in retinal images of circular apertures seen in Maxwellian view, 1053(FB*35*)
rods and cones
luminance thresholds and their relation to, 198
fixation disparity
photographic measurement of, 343(FD*72*)
fovea
threshold intensity in central
effect of exposure time on relationship between stimulus size and, 343(FD*73*)
light sources
Sylvania glow modulator tube as flash source
spectral energy calibration of, 30
perception
shape and size constancy in photographic reproductions, 658
presbyopia
ciliary muscle in, 344(FD*76*)
increase in accommodative vergence in region of near point of accommodation, 344(FD*76*)
psychometric judgment
scaling in presence of multidimensionality, 1053(FB*41*)
retina
additivity data
blur of retinal image, 114(TD*81*)
Stiles-Crawford effect, 114(TD*81*)
summated response of retina to light entering different parts of pupil, 114(TD*81*)
foveal cones and their spectral sensitivity after colored light adaptations, 106(L)
human electroretinogram
response to selective chromatic adaptation, 208
image motion effect on contrast thresholds for maintained vision, 740
image motions from measurements of rotational movements of eye, 1054(F*52*)
light distribution of circular apertures seen in Maxwellian view, 1053(FB*35*)
receptors
photopic — of typical achromat, 1052(FB*32*)
model retinal — studied at microwave frequencies, 1052(FB*33*)
spectral sensitivity with two sizes of foveal stimulus, 707
stimulus orientation and visual performance, 256(L)
threshold
contrast — for moving point sources, 612
energy, area, and time relationships in, 394
sensitivity
increases in — with increased light adaptation, 344 (FD*75*)
scotopic, mesopic, and photopic spectral — curves compared, 338(TC*56*)
stereoscopic
acuity and duration of stimuli, 343(FD*71*)

Wavelength
standards, interferometric
iodine absorption line, 120(SA*16*)
krypton I, 120(SA*15*)
mercury-198, 120(SA*15*)
isotopic purity of — produced by neutron irradiation of gold-197, 1032
provisional — in vacuum ultraviolet
Cu II, 182
Fe II, 182
CO $R(18)$ line to Hg-198 green line, 144
CO 2–0 band relative to $R(18)$, 686
derived wavelength standards for 1–0 band of CO, 686
secondary and tertiary — in 1.5–2.5μ region, 144
HCN relative to Hg-198 green line, 144
thorium, secondary, 1057(SB*31*)

Xerography
current status, 1050(F*2*)
X-Rays (see also *Radiation, Sources, and Spectra*)
attenuation coefficients from 10 kev to 100 Mev, 1042(N)
diffraction
of macromolecular structures and optical diffractometer, 1061
reflection
from condensed metal films, 987

Zinc Sulfide
refractive index of simple synthetic — crystal in 0.44–1.4μ region, 240
